

SITEWARN™ FOR TRANSPORTATION AND LOGISTICS

Weather warnings for the segment, not the whole network.

A county warning tells dispatch nothing about which trucks are actually driving into it. SiteWarn™ maps your lanes as corridors and your terminals and DCs as points, and live meteorologists watch all of it 24/7/365 — warning you about the stretch of road, the yard and the time window that are really in the storm's path. And because a network plans days ahead, so do we: a 7-day outlook on every lane, and high-wind and winter-storm warnings issued days out, not hours.

24/7/365 Live meteorologists monitoring your site	\$99.95 Per month, single site. Group rate for multi-site	14 yrs Serving weather-sensitive operations	Unlimited Users, at no extra cost per person

— Why fleets and distribution networks choose SiteWarn

A fully customized program: you set the thresholds, we watch the weather.

Corridors and terminals, not counties

We load your routes as buffered corridors — a few miles either side of the centerline — and your terminals, DCs and yards as points. A warning names the segment, the mile range and the time window, so dispatch holds the two loads headed into it and the rest of the network keeps rolling.

Lead time measured in days, not minutes

Planners, load builders and driver managers can't work off a 60-minute warning. Every lane and terminal gets a 7-day planning outlook and large-scale high-wind, winter-storm and flooding events go out as watches up to 7 days ahead, converted to warnings by day 5. Short-fuse thunderstorm hazards still get 60 minutes or more.

Wind warnings built for high-profile equipment

Rollover and jackknife risk starts well below the gust speeds the NWS warns on. You set the crosswind threshold for your trailers. thunderstorm outflow and gap winds are warned an hour or more ahead of the segment, timed to where your trucks will be, not where they are.

Yards, docks and DCs covered too

Lightning at the dock, hail on the yard, ice on the ramps and flooding at the gate are site problems, and we cover them the same way we cover any facility — with thresholds per location and null-warning notifications when a county warning doesn't reach your yard.

— SiteWarn™ vs. free weather information

What you actually get when the storm is close enough to matter.

Capability	SiteWarn™	NWS	Internet / TV
Warnings drawn to your site, not the county	✓	✗	✗
Cloud-to-ground lightning warnings	✓	✗	✗
Thresholds you define, site by site	✓	✗	✗
Told when a warning does <i>not</i> apply to you	✓	✗	✗
A meteorologist you can call	✓	✗	✗
24/7/365 coverage	✓	✓	✗
