

SITEWARN™ FOR UTILITY-SCALE SOLAR

Hail, wind, lightning and more: who's watching your array?

Severe hail can total millions of dollars in panels in minutes. SiteWarn™ puts live meteorologists on your exact array boundary 24/7/365 and warns your O&M team of hail-capable storms, lightning and high wind — with the lead time you need to stow, clear crews or de-energize before impact.

24/7/365 Live meteorologists monitoring your site	\$99.95 Per month, single site. Group rate for multi-site	14 yrs Serving weather-sensitive operations	Unlimited Users, at no extra cost per person

— Why solar owners and O&M teams choose SiteWarn

A fully customized program: you set the thresholds, we watch the weather.

Hail alerts in time to stow

We give your O&M team advance warning on hail-capable storms approaching your array — with enough lead time to drive trackers to stow position before impact — then follow the storm and tell you when it's safe to return to tracking.

Specific to your array boundary

Instead of warnings drawn around whole counties, we monitor your exact array footprint so you only stow, dispatch or de-energize when there's a real threat to your site. When the NWS warns your county but your array is clear, you get a null-warning notification and stay in production.

Lightning and wind warnings the NWS won't give you

The National Weather Service issues no warnings for cloud-to-ground lightning, and its wind thresholds aren't site-specific. We alert you to lightning within your custom radius and to winds above the limit your trackers and crews require.

Alerts your way, unlimited users

Web portal, app, email, text or push, phone (live or recorded) — or straight into your SCADA, tracker control or O&M platform by API — to O&M, control room, asset management and field staff. Interactive radar with your array footprint mapped, at no extra cost per user.

— SiteWarn™ vs. free weather information

What you actually get when the storm is close enough to matter.

Capability	SiteWarn™	NWS	Internet / TV
Warnings drawn to your site, not the county	✓	✗	✗
Cloud-to-ground lightning warnings	✓	✗	✗
Thresholds you define, site by site	✓	✗	✗
Told when a warning does <i>not</i> apply to you	✓	✗	✗
A meteorologist you can call	✓	✗	✗
24/7/365 coverage	✓	✓	✗
