

SITEWARN™ FOR ELECTRIC UTILITIES

Warnings drawn to your territory, not the county.

Your service territory crosses county lines, and the government's warnings don't respect yours. SiteWarn™ monitors your substations, work zones and right-of-way segments 24/7/365, warns line crews about lightning the NWS never will, and gives operations days of lead time on the wind and ice events that drive outage hours — so you stage crews before damage starts, not after.

24/7/365 Live meteorologists monitoring your site	\$99.95 Per month, single site. Group rate for multi-site	14 yrs Serving weather-sensitive operations	Unlimited Users, at no extra cost per person

— Why utilities and cooperatives choose SiteWarn

A fully customized program: you set the thresholds, we watch the weather.

Lightning warnings for line crews and substations

The National Weather Service issues no warnings for cloud-to-ground lightning — the single biggest day-to-day hazard for aerial crews. We alert dispatch in time to pull crews off poles and out of substations before a strike, and clear them to go back up when it's safe.

Territory-specific alerts and warnings

Oversized county warnings don't fit your territory. We monitor your exact substations, work zones and right-of-way segments, so dispatch only stops the work that's actually at risk and the rest of the day's jobs keep moving.

Pre-position resources before storms hit

Large-scale wind and ice events are warned days out, not hours: watches up to 7 days ahead, warnings by day 5, with onset, peak and end timing by district. That's time to stage crews, activate mutual aid and pre-deploy bucket trucks — cutting restoration times and outage hours.

Alerts your way, unlimited users

Portal, app, email, text or push, phone (live or recorded) — or straight into your OMS or dispatch system by API — to dispatch, operations, safety and field crews. Interactive radar with every substation and work zone mapped, at no extra cost per user.

— SiteWarn™ vs. free weather information

What you actually get when the storm is close enough to matter.
